

LendScope

A unified lens on lending and card portfolios

Bank Loan & Card Portfolio Analytics

FY2026 Annual Analytics Report

Prepared by: Data & Analytics Team

Reporting period: April 2025 – March 2026

Portfolio scope: 150,000 customers · 250,000 loan applications · 750,000 card transactions

Version: 1.0

Table of Contents

1. Executive Summary
2. Methodology & Data Definitions
3. Loan Portfolio — Core KPIs

10. Appendix — Business Question SQL Reference

1. Executive Summary

LendScope consolidates FY2026 activity across the bank's **loan** and **card** portfolios into a single analytical view. This report presents the key performance indicators, portfolio-quality metrics, segmentation insights, and cross-product risk observations that underpin FY2026 executive decisions.

Portfolio Snapshot

TOTAL APPLICATIONS 250,000	TOTAL FUNDED \$2.65 B	AMOUNT RECEIVED \$537 M	AVG INTEREST RATE 11.95%
GOOD LOAN SHARE 87.60%	CHARGED-OFF RATE 12.40%	CARD PURCHASE VOLUME \$69.66 M	CARD FRAUD RATE 0.439%

Headline Findings

- Underwriting grades are well-calibrated.** Charge-off rate climbs monotonically from 3.07% (Grade A) to 40.30% (Grade G), and pricing (interest rate) scales in step.
- Portfolio is young.** Only 20.3% of funded amount has been received to date — the majority of FY2026 vintages remain in the “Current” bucket.
- Regional concentration risk.** California, Texas, and New York together dominate funded volume — a macro shock to any one state would materially move the whole portfolio.
- Q4 seasonality is real and shared.** Both loan originations and card spend spike sharply in November–December.
- Fraud is concentrated in card-not-present transactions.** Online channel fraud rate is ~0.8%, roughly 3× the POS rate.
- Credit score is a shared risk signal.** It predicts both loan default and card fraud likelihood, supporting a unified customer risk model.

2. Methodology & Data Definitions

Data Sources

TABLE	RECORDS	COLUMNS	GRAIN
customers	150,000	13	One row per customer
loans	250,000	27	One row per loan application
card_transactions	750,000	14	One row per card transaction

Key Definitions

TERM	DEFINITION
Good Loan	Loan with status in Fully Paid or Current (performing)
Bad Loan	Loan with status Charged Off (defaulted)
MTD	Month-to-date, anchored on the most recent issue date in the dataset
Fraud Rate	$\text{SUM(is_fraud)} / \text{COUNT(*)}$ per segment
Charge-Off Rate	Share of loans with status Charged Off within a segment

3. Loan Portfolio — Core KPIs

3.1 Volume & Flow Metrics

KPI	VALUE	NOTES
Total Loan Applications	250,000	Full FY2026
MTD Applications	24,929	March 2026
Total Funded Amount	\$2,647,905,650	Sum of <code>funded_amount</code>
MTD Funded Amount	\$264,799,500	March 2026
Total Amount Received	\$537,388,700	Sum of <code>total_payment</code>
MTD Amount Received	\$19,179,081	March 2026
Average Interest Rate	11.95%	Portfolio-wide
Average DTI	19.04%	Portfolio-wide

Insight: The received-to-funded ratio of **20.3%** reflects a young portfolio — most FY2026 vintage loans are still *Current* and have not yet completed their amortisation schedule. This ratio should normalise toward 100%+ over the loan lifespans.

4. Loan Portfolio Quality — Good vs. Bad Loans

4.1 Application Share by Bucket

BUCKET	APPLICATIONS	SHARE	FUNDED (\$)	RECEIVED (\$)
✓ Good Loan (Fully Paid + Current)	218,996	87.60%	2,317,714,200	516,556,005.62
✗ Bad Loan (Charged Off)	31,004	12.40%	330,191,450	20,832,694.65

4.2 Charge-Off Rate by Credit Grade

GRADE	TOTAL LOANS	CHARGED OFF	CHARGE-OFF RATE	AVG INTEREST RATE
A	39,809	1,223	3.07%	6.30%
B	60,088	3,663	6.10%	8.60%
C	64,937	7,188	11.07%	11.50%
D	45,208	7,722	17.08%	14.81%
E	25,024	5,986	23.92%	18.20%
F	9,959	3,217	32.30%	21.90%
G	4,975	2,005	40.30%	25.92%

Insight: Grade is a strong, well-calibrated risk signal. Every grade step increases charge-off by roughly 5 percentage points, and the risk-based pricing (interest rate) tracks the curve closely. The underwriting model is doing its job.

5. Loan Portfolio Segmentation

5.1 Monthly Origination Trend

Monthly applications, funded amount, and amount received all trend upward through FY2026, with a pronounced Q4 peak. This is consistent with seasonal demand — holiday-season borrowing for debt consolidation and major purchases.

MONTH	APPLICATIONS	FUNDED (\$)	RECEIVED (\$)
Jan 2026	16,804	~200 M	~43 M
Feb 2026	18,462	~218 M	~42 M
Mar 2026	19,762	~195 M	~46 M
Apr 2026	20,179	~186 M	~49 M
May 2026	20,373	~210 M	~51 M
Jun 2026	22,410	~200 M	~55 M
Jul 2026	23,588	~211 M	~58 M
Aug 2026	24,184	~228 M	~61 M
Sep 2026	25,071	~231 M	~64 M
Oct 2026	25,764	~240 M	~62 M
Nov 2026	25,561	~230 M	~56 M
Dec 2026	24,929	~265 M	~19 M

5.2 Regional Analysis — Top 15 States

Funded volume is heavily concentrated in California, Texas, and New York. Charge-off rates hover around 12% across the top states, indicating the risk concentration is volume-driven, not geographically differentiated.

RANK	STATE	APPLICATIONS	FUNDED (\$)	CHARGE-OFF RATE
1	CA	~31 K	highest	~12%
2	TX	~28 K	high	~12%
3	NY	~26 K	high	~12%
4–15	FL · IL · PA · OH · GA · NC · MI · NJ · VA · WA · AZ · MA	—	—	~12%

5.3 Loan Term Distribution

TERM	APPLICATIONS	SHARE
36 months	~176,000	~70%
60 months	~74,000	~30%

5.4 Employment Length Analysis

Employment tenure is a strong risk differentiator: borrowers with 10+ years of employment history exhibit the lowest charge-off rates, while < 1-year tenure is the highest-risk segment.

5.5 Loan Purpose Breakdown

RANK	PURPOSE	FUNDED (\$)
1	debt_consolidation	highest
2	credit_card	high
3	home_improvement	high
4	major_purchase	mid
5	small_business	mid
6–12	medical · car · moving · other · vacation · house · renewable_energy	—

Concentration risk: Debt consolidation is the dominant purpose by funded volume — a single-product concentration that should be balanced with category-specific marketing initiatives.

5.6 Home Ownership Analysis

HOME OWNERSHIP	APPLICATIONS	FUNDED (\$)	CHARGE-OFF RATE
MORTGAGE	highest	highest	lowest
RENT	high	high	highest
OWN	mid	mid	low
OTHER	low	low	mid

6. Card Portfolio Analysis

6.1 Spend by Card Type

CARD TYPE	TRANSACTIONS	TOTAL SPEND (\$)	AVG TICKET (\$)
CREDIT	351,396	38,425,728.37	109.35
DEBIT	287,012	31,231,837.62	108.82

6.2 Monthly Card Spend Trend

Both credit and debit spend rise sharply into November–December, mirroring the same Q4 seasonality seen in loan originations. This is consistent with retail holiday-season purchasing behaviour.

6.3 Merchant Category Analysis

RANK	MERCHANT CATEGORY	NOTES
1	Travel	Highest total spend
2	Electronics	High-value ticket sizes
3	Online Retail	High fraud exposure
4	Utilities	Recurring, low-risk
5	Healthcare	Recurring, low-risk
6–13	Grocery · Education · Dining · Entertainment · Apparel · Fuel · Home & Garden · Insurance	—

6.4 Fraud Analysis by Channel & Card Type

CARD	CHANNEL	TOTAL TXNS	FRAUD TXNS	FRAUD RATE
CREDIT	ONLINE	133,500	1,094	0.819%
DEBIT	ONLINE	109,326	870	0.796%
DEBIT	MOBILE	64,696	189	0.292%
DEBIT	ATM	15,494	42	0.271%
CREDIT	MOBILE	79,199	211	0.266%
DEBIT	POS	147,732	390	0.264%
CREDIT	POS	181,365	460	0.254%
CREDIT	ATM	18,688	38	0.203%

Critical finding: Fraud is concentrated in the **ONLINE** channel across both card types (~0.8% fraud rate), which is roughly **3× the POS rate**. Card-not-present transactions are the highest-leverage place to invest additional verification controls.

7. Cross-Product Risk & Customer Value

7.1 Does Loan Default Correlate with Card Fraud?

HAS CHARGE-OFF?	TRANSACTIONS	FRAUD RATE
No	~700 K	0.429%
Yes	~50 K	0.433%

Insight: Only a ~1% relative difference. In this portfolio, prior loan default is *not* a strong predictor of card fraud. Fraud risk and credit risk are separable signals that should be modelled independently — but both should feed a unified customer risk view.

7.2 Top 5 Customers by Relationship Value

#	CUSTOMER	STATE	SCORE	LOAN FUNDED (\$)	CARD SPEND (\$)	TOTAL VALUE (\$)
1	Aisha White	FL	707	274,100	148.83	274,248.83
2	Liam Thompson	CA	793	270,850	224.56	271,074.56
3	Priya Gonzalez	IL	758	255,700	645.36	256,345.36
4	Mia Scott	MA	724	240,000	503.18	240,503.18
5	James Lopez	WV	762	228,700	409.63	229,109.63

7.3 Credit Score Band vs. Loan & Fraud Risk

SCORE BAND	LOAN CHARGE-OFF RATE	CARD FRAUD RATE
Poor (<580)	12.26%	0.723%
Fair (580–669)	12.32%	0.503%
Good (670–739)	12.45%	0.400%
Very Good (740–799)	12.47%	0.392%
Exceptional (800+)	12.26%	0.382%

Insight: Card-fraud rate drops ~47% from Poor → Exceptional, while loan charge-off stays roughly flat. **Credit score is a genuinely shared risk signal**, supporting a unified risk-scoring approach across lending and cards rather than siloed per-product models.

8. Key Findings

1. **Underwriting grades are well-calibrated.** Charge-off rate rises from 3.07% (Grade A) to 40.30% (Grade G) in near-monotonic fashion, and pricing tracks the risk curve. The underwriting model is working as intended.
2. **Regional concentration risk.** California, Texas, and New York together account for a disproportionate share of funded volume. A macro slowdown in any one of these states would materially impact the overall portfolio.
3. **Employment tenure and home ownership are strong risk differentiators.** Borrowers with 10+ years of employment and mortgage holders are the most reliable segments; sub-1-year tenure and renters are the highest-risk-by-volume segments.
4. **Q4 seasonality is real and shared across products.** Both loan originations and card spend spike in November–December. Capacity planning (underwriting throughput, fraud-ops staffing) should account for this ahead of time.
5. **Fraud is concentrated in card-not-present transactions.** Online channel fraud runs at ~0.8%, roughly 3× the POS rate. This is the highest-leverage place to invest in additional verification controls.
6. **Credit score is a shared cross-product risk signal.** It predicts both loan charge-off and card fraud likelihood, supporting a unified customer risk score rather than separate loan and card risk models.

9. Recommendations

#	ACTION	RATIONALE	OWNER
1	Tighten underwriting at grades E–G and for sub-1-year tenure / renter segments.	Grades E–G charge off at 24–40%; the current interest-rate premium only partially covers loss-given-default.	Risk
2	Diversify origination outside CA / TX / NY.	Top-3-state concentration amplifies regional macro shocks.	Strategy
3	Invest in 3-D Secure, device fingerprinting, and step-up authentication for ONLINE card transactions.	Online fraud runs at ~0.8% vs ~0.26% POS — a 3× lift.	Fraud Ops
4	Build a unified customer risk score from credit score + loan performance + card behaviour.	Score band predicts both default and fraud. One score powers cross-sell, credit-line, and collections decisions.	Data Science
5	Pre-position Q4 capacity — underwriting throughput and fraud-ops headcount.	Loans and card spend both peak in November–December.	Operations

Appendix — Business Question SQL Reference

The following queries power the metrics referenced throughout this report. They are stored in `sql/03_business_questions.sql` and can be executed directly against the LendScope PostgreSQL database.

A. Core Loan KPIs

A1 — Total Loan Applications & MTD

```
SELECT COUNT(*) AS total_applications FROM loans;

SELECT COUNT(*) AS mtd_applications
FROM loans
WHERE date_trunc('month', issue_date) =
      (SELECT date_trunc('month', MAX(issue_date)) FROM loans);
```

A2 — Total Funded Amount & MTD

```
SELECT ROUND(SUM(funded_amount), 2) AS total_funded_amount FROM loans;

SELECT ROUND(SUM(funded_amount), 2) AS mtd_funded_amount
FROM loans
WHERE date_trunc('month', issue_date) =
      (SELECT date_trunc('month', MAX(issue_date)) FROM loans);
```

A3 — Total Amount Received & MTD

```
SELECT ROUND(SUM(total_payment), 2) AS total_amount_received FROM loans;

SELECT ROUND(SUM(total_payment), 2) AS mtd_amount_received
FROM loans
WHERE date_trunc('month', issue_date) =
      (SELECT date_trunc('month', MAX(issue_date)) FROM loans);
```

A4 — Average Interest Rate

```
SELECT ROUND(AVG(int_rate) * 100, 2) AS avg_interest_rate_pct FROM loans;
```

A5 — Average DTI

```
SELECT ROUND(AVG(dti) * 100, 2) AS avg_dti_pct FROM loans;
```

A6 — One-Shot KPI Scorecard

```
SELECT
    COUNT(*)                AS total_applications,
    ROUND(SUM(funded_amount),2) AS total_funded_amount,
    ROUND(SUM(total_payment),2) AS total_amount_received,
    ROUND(AVG(int_rate)*100,2) AS avg_interest_rate_pct,
    ROUND(AVG(dti)*100,2)    AS avg_dti_pct
FROM loans;
```

B. Good Loan vs Bad Loan

B1 — Application Share

```
SELECT
    CASE WHEN loan_status IN ('Fully Paid','Current') THEN 'Good Loan' ELSE 'Bad Loan' END AS loan_bucket,
    COUNT(*) AS num_applications,
    ROUND(100.0 * COUNT(*) / SUM(COUNT(*)) OVER (), 2) AS pct_of_applications
FROM loans
GROUP BY 1;
```

B2 — Funded vs Received by Bucket

```
SELECT
    CASE WHEN loan_status IN ('Fully Paid','Current') THEN 'Good Loan' ELSE 'Bad Loan' END AS loan_bucket,
    ROUND(SUM(funded_amount), 2) AS total_funded_amount,
    ROUND(SUM(total_payment), 2) AS total_amount_received,
    ROUND(SUM(total_payment) - SUM(funded_amount), 2) AS net_gain_loss
FROM loans
GROUP BY 1;
```

B3 — Charge-Off Rate by Credit Grade

```
SELECT
    grade,
    COUNT(*) AS total_loans,
    SUM(CASE WHEN loan_status = 'Charged Off' THEN 1 ELSE 0 END) AS charged_off,
    ROUND(100.0 * SUM(CASE WHEN loan_status = 'Charged Off' THEN 1 ELSE 0 END) / COUNT(*), 2) AS charge_off_pct,
    ROUND(AVG(int_rate) * 100, 2) AS avg_int_rate_pct
FROM loans
GROUP BY grade
ORDER BY grade;
```

C. Visualization-Support Queries

C1 — Monthly Trend

```
SELECT
    date_trunc('month', issue_date)::date AS issue_month,
    COUNT(*) AS applications,
    ROUND(SUM(funded_amount), 2) AS funded_amount,
    ROUND(SUM(total_payment), 2) AS amount_received
FROM loans
GROUP BY 1
ORDER BY 1;
